

The advanced protection you trust—now in the cloud for modern, mobile businesses.

Like its server-based counterpart, VIPRE Endpoint Security - Cloud Edition delivers the highest-rated malware protection at the best value in the industry. But VIPRE Cloud extends that protection with added advantages—including simplified administration and the industry's first and only user interface designed for mobile access.

If you're currently using VIPRE Antivirus Business, Business Premium or Endpoint Security - Server Edition, upgrading to the cloud is a strategic move for today's modern, on-the-go demands—and our Endpoint Migrator Tool makes it fast and easy.

VIPRE Endpoint Migrator streamlines the move

VIPRE Endpoint Migrator is a utility designed to assist you in moving resources—such as policies and exclusions—from one VIPRE site to another. In other words, if you're looking to quickly and easily move from server-based VIPRE to VIPRE Cloud Edition, or even to split or combine VIPRE sites, this is the perfect tool.

Launch the tool and follow the prompts

Connect VIPRE Endpoint Migrator to one of your existing sites, and the tool will display that site's available resource sets. Simply select the set of resources you want migrated, and then replicate those resources (in the case of policies and other content). Run the Migrator tool as many times as needed—and you can migrate all resources, or just a few at a time.

Migrator does the heavy lifting

In the typical VIPRE paradigm, endpoint agents and policies/exclusions are tightly bound—so Endpoint Migrator knows to replicate all policies and exclusions you select on the target site. If a policy isn't selected, it will not be migrated.

Everything ends up in the right place

Migrator works behind the scenes to ensure that each migrated agent ends up with the appropriate policy and exclusions. For example: VIPRE Cloud treats exclusions as a separate top-level resource class that is then associated with one or more policies. If you're migrating from VIPRE Server, Migrator will analyze the set of exclusions in all policies to be migrated and then create multiple exclusion sets based on how they intersect across VIPRE Server policies. (Of course, it's always good to revisit the policies and exclusions in the target site and see if you can simplify their organization.)

Leading the Industry

VIPRE receives top ratings from the industry's leading independent testing authorities.

Three reasons to migrate today

When current VIPRE Server customers upgrade to the cloud, they score several significant benefits:

A more modern way to get the highest-rated protection

Forward-thinking businesses are moving many critical business applications to the cloud, in part because cloud platforms ensure the most modern functionality and interfaces, with little to no footprint to manage. By migrating to VIPRE Cloud, you can similarly future-proof your IT security investment, while still enjoying VIPRE's highly rated, award-winning malware protection.

The industry's only mobile interface for immediate, on-the-go response

Unlike competitive solutions, VIPRE Cloud is architected for mobile first. That means our highly intuitive interface is specifically tailored for access by smartphones and portable devices. Just imagine: No annoying popup windows or scrolling slowdowns that obstruct the data you need. VIPRE Cloud is easy to navigate from anywhere, at any time, against every threat—so you can act fast, when it matters most.

Easier than ever to deploy, use, and manage

One of the primary reasons for moving to a cloud-based offering is the promise of simplified administration. Migrating to VIPRE Cloud eliminates server management, streamlines the implementation process, and puts immediate threat response at your fingertips no matter where you are—so you're always protected and productive.
